

# Feedback - Group C - Airline Industry

TA: Nico Rojas

04/02/2021

## General Comments.

- Interesting proposal, you clearly have all the data you need and several ideas.
- Even though you probably may have some visualizations in mind, you should have by now a list of all the visualization you plan to implement on your project and be sure they are feasible.
- I see you are already working on some of your maps which is a good idea. Flight data can be complex and may require taking several decisions.
- One important aspect of your proposal is comparisons between before and after COVID.
  - If you want to compare maps over different years, have you considered using Shiny? Another possibility is using animated maps.
  - Are you planning to draw some time-series?
  - Which will be your interactive visualization? What will be the interactive aspects of your visualizations and why?

## Specific Comments.

- Since it's fairly common to work with flight data, there are some tutorials that describe how to deal with many of the complexities of building flight maps in ggplot (ie. [this one](#)). It may be a good idea to check them out.
- Have you already checked the feasibility of the your text analysis? What are the patterns you think you may find using the text analysis of the airlines social media?
